

IP Phones

ITS IP Phones are advanced, feature-rich, multi-line phones for business. Stylish in function and design, ITS IP Phones are ideal for business using a hosted IP telephony service, or an IP PBX. The ITS IP Phones leverage industry leading VoIP technology from Polycom, Linksys, and Grandstream to deliver the highest quality, value, and support available in the industry.

Standard features on ITS IP Phones include two to six appearances, two SIP account registrations, dual switched Ethernet ports, 802.3af PoE support, a high resolution graphical display, speakerphone, and a 2.5 mm head-set port. With a simple software update, some models of the ITS IP Phones are upgradable to four SIP account registrations, that allow the phone to ring to four different numbers rather than two numbers. Each line can be independently configured to use a unique phone number (or extension), or can be configured to use a shared number that is assigned to multiple phones.

ITS basic IP Phones come standard with:

- Two Lines
- Speaker Phone
- LCD Graphical Display
- 3-Way Conferencing Capability

Depending on the specific model selected advanced features such as; HD Voice, Color Display, up to six lines and Expandable with Expansion module, are available.

Benefits of IP Phones

With dozens of features and configurable service parameters, ITS IP Phones address the requirements of traditional business users while leveraging all the advantages of IP technology. Features such as easy station moves, shared extension presence, and shared line appearances (across local and geographically-disbursed locations) are just some of the many advantages.

How do ITS IP Phones Work?

ITS IP Phones use industry standard encryption protocols to provide secure remote calls over an IP network such as the internet.
